

1. Visual Category Selection

As a forum visitor, I want to search a specific name, So that I can see the specific details belonging only to that term.

- **Acceptance Criteria:**
 - **Initially, the main area shows a "Search" bar that removes options as you type the specified term.**
 - **The screen updates and narrows down the options as you type.**

2. Authentication

As a registered user, I want to log in with my username and password, So that I can access my personalized dashboard and view the question categories.

- **Acceptance Criteria:**
 - **If I enter the wrong credentials, a clear "Invalid login" message appears.**
 - **Upon successful login, the app redirects me to the Dashboard where my username is displayed in the header.**
 - **The Logout link successfully clears my session/token and returns me to the Login screen.**
 - **Architecture: The Presentation layer sends a POST request to the Node.js API, which verifies the user against the Data layer.**

3. Navigation (Logout)

As a user who has finished my session, I want to click a single logout link, So that I can securely exit the application and return to the starting screen.

- **Acceptance Criteria:**
 - **A "Logout" link is visible on the Dashboard at all times.**
 - **Clicking the link immediately takes me back to the Login page.**
 - **I can no longer access the Dashboard until I log in again.**
